Koch Fertilizer Trading Sàrl Introduces Innovative Nitrogen Fertiliser to U.K. Market

MARLBOROUGH, U.K. – Koch Fertilizer Trading Sàrl and Agrotain International are offering K^uN, an innovative new nitrogen fertiliser that improves farmers' productivity, cost effectiveness and environmental stewardship. K^uN is the tradename for Koch Fertilizer's Koch advanced nitrogen.

"We believe K^uN will result in significant agronomic benefits for our farming customers," said John Ridd, business leader for Koch Fertiliser Ltd. "Powering K^uN is the unique technology of AGROTAIN[®], which essentially squeezes every kilo of productivity out of nitrogen. The effectiveness of AGROTAIN is thoroughly demonstrated by U.K. research such as the Defra project NT26. K^uN prevents volatilization losses from urea to ensure that the farmer's nitrogen investment is available for the crop and not lost to the atmosphere."

"In addition to the performance benefits, this exciting product provides U.K. growers with a choice in nitrogen fertilisers," John Ridd said. "Innovation and choice is part of Koch Fertiliser's continued commitment to the future of British agriculture."

"Koch Fertiliser's products are ideal for bringing the AGROTAIN technology to the U.K. market," said Brian Wade of Agrotain International. "Most nitrogen products suffer losses like denitrification (nitrous oxide losses) or volatilization (ammonia losses). The performance and consistency of AGROTAIN in preventing volatilization and increasing the productivity of urea - the most widely used nitrogen in the world - have been well demonstrated by multiple U.K. research institutes."

Information about K^uN is available now in preparation of the 2010/2011 growing season.

Koch Fertiliser refers to Koch Fertilizer, LLC or any of its affiliates. Koch Fertilizer Trading Sàrl and Koch Fertiliser Ltd. are affiliates of U.S.-based Koch Fertilizer, LLC. Koch Fertilizer, LLC and its affiliates produce, distribute and globally market nitrogen fertilizers, including anhydrous ammonia, urea, nitric acid, UAN solutions, ammonium nitrate solution, ammonium polyphosphate and ammonium thiosulfate. The companies' fertilizer interests have the capability of producing more than 10 million metric tons of fertilizer products annually. Koch Fertilizer, LLC is an indirect, wholly owned subsidiary of Koch Industries, Inc. (www.kochind.com), one of the largest private companies in America.

AGROTAIN International is the world's largest producer of StabilizedNitrogen[™] fertilizers containing proprietary nitrogen stabilizer technology to reduce nitrogen losses from urea and UAN, and extend plant-available nitrogen for healthier plants and higher yields. This award-winning technology has a proven track record, backed by worldwide research studies. AGROTAIN International's products are
